## Abstracts

According to our (Global Info Research) latest study, the global Vinca Alkaloid Compounds market size was valued at US\$ 116 million in 2024 and is forecast to a readjusted size of USD 183 million by 2031 with a CAGR of 6.8% during review period.

Vinca alkaloid compounds are a class of natural compounds extracted from the plant *Catharanthus roseus*. They belong to a class of nitrogen-containing alkaline compounds with a large number of natural secondary metabolites of plants. These alkaloids have multiple pharmacological activities, especially showing great potential in the treatment of cancer, cardiovascular and other diseases, and therefore have received extensive attention and research.

At present, a variety of vinca alkaloid compounds have been officially used in clinical practice or are in the clinical research stage, including but not limited to:

Vinblastine: an important anti-tumor terpenoid indole alkaloid, mainly used in the treatment of Hodgkin's disease and choriocarcinoma, and also has certain efficacy on lymphosarcoma, melanoma, ovarian cancer, leukemia, etc.

Vincristine: another important anti-tumor drug, with a similar pharmacological mechanism of action to vinblastine.

Vindesine and Vinorelbine: also commonly used vinca alkaloid anti-tumor drugs in clinical practice.

As the number of cancer patients increases worldwide, the demand for anti-tumor drugs

is also rising. Vinca alkaloid compounds, such as vincristine, vinblastine and vinorelbine, are important anti-tumor APIs and are widely used in various cancer drugs, and the market demand continues to grow. In recent years, the rise of precision medicine has made drug research and development pay more attention to targeted and personalized treatment. Vinca alkaloid compounds have great application potential in the field of precision medicine and are expected to further promote the growth of market demand.

With the increasing attention paid to the development of natural product drugs, the market for vinca alkaloid compounds has shown a growth trend. However, the content of these alkaloids in natural vinca plants is low, which is difficult to meet the growing market demand. Therefore, in the future, it is necessary to improve production efficiency through chemical synthesis, biosynthesis and other technical means to meet clinical applications and market needs.

At present, China is the largest market for vinca alkaloid compounds, accounting for about 53% of the market share, followed by Europe and North America, which together account for 15% of the market share. The main manufacturers are Pierre Fabre, Minakem, Baiyun Hanfang Modern Pharmaceutical, etc. The top three manufacturers account for about 40% of the market share.
