Abstracts

Vinyl Ester Resins, also known as VER, is a resin produced by the esterification of an epoxy resin with an unsaturated monocarboxylic acid. The reaction product is then dissolved in a reactive solvent, such as styrene, to a 35–45 percent content by weight.

Scope of the Report:

This report focuses on the Vinyl Ester Based Resins in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. At present, the global market is dominated by China and North America. China is the world's largest production area. In 2016, China hold 51.26% of the global share of production.

The upstream of Vinyl Ester Resins industry is Bisphenol A, epoxy resin, methacrylic acid, maleic anhydride, styrene and so on. Since raw material are most commodities, and most manufacturers can achieve part of the internal supply of raw materials, although raw material ratio in the manufacturing cost is relatively high, in general, bargaining power of raw material enterprises is weak.

The worldwide market for Vinyl Ester Based Resins is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
