## Abstracts

According to our (Global Info Research) latest study, the global Vinylester Resins market size was valued at USD 556.7 million in 2023 and is forecast to a readjusted size of USD 828.1 million by 2030 with a CAGR of 5.8% during review period.

Vinyl Ester Resins is produced by the esterification of epoxy resins in the presence of monocarboxylic acid. Vinyl Ester Resins are designed much more specifically as they are hybrid form of Polyester Resins that has been strengthened by the addition of Epoxy Resins. They have high resistance to greater vibrational loads because they are more tolerant of stretching than Polyester Resins, showing less stress cracking and are therefore able to absorb larger impacts without damage. Vinyl ester resins are less absorbent of water than Polyester Resins and also possess outstanding thermal stability.

The Global Info Research report includes an overview of the development of the Vinylester Resins industry chain, the market status of Fiber Reinforced Plastic (FRP) (Bisphenol-A Vinyl Ester Resin, Novolac Vinyl Ester Resin), Construction (Bisphenol-A Vinyl Ester Resin, Novolac Vinyl Ester Resin), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Vinylester Resins.
