The global Viral Vector CDMO Services market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Viral Vector CDMO Services refers to contract development and manufacturing organizations (CDMOs) that provide custom production and development services for viral vectors. Viral vectors are a commonly used gene therapy tool that deliver target genes into human cells to treat disease. Viral Vector CDMO Services provides various types of viral vector production services, including adenovirus vectors, AAV vectors, and LV vectors.

CDMO companies usually provide a full range of viral vector production and development services from the research stage to commercial production, including quality control, preparation, analysis, packaging and storage services. These services help accelerate the development and commercialization of gene therapy drugs and advance the field of gene therapy.

CDMO companies can also help customers develop production plans that suit their product needs, and provide customized technical support and solutions based on customer needs. Customers can choose the appropriate CDMO company as a partner based on their needs to ensure the high-quality production and successful launch of their gene therapy products.
