Virtual Account Management (VAM) is a cash management technique that creates numerous sub-accounts (virtual accounts) within a single physical bank account, allowing businesses to track transactions, manage liquidity, and reconcile payments with high granularity, similar to having many physical accounts, but with a single central pool for funding. VAM streamlines operations by automating reconciliation, improving cash visibility, reducing manual processes, and centralizing reporting across different entities or purposes, all while minimizing the number of actual bank accounts a company needs.
