The global Virtual Account Management (VAM) Platform market size is expected to reach \$ 4353 million by 2032, rising at a market growth of 15.2% CAGR during the forecast period (2026-2032).

Virtual Account Management (VAM) is a cash management technique that creates numerous sub-accounts (virtual accounts) within a single physical bank account, allowing businesses to track transactions, manage liquidity, and reconcile payments with high granularity, similar to having many physical accounts, but with a single central pool for funding. VAM streamlines operations by automating reconciliation, improving cash visibility, reducing manual processes, and centralizing reporting across different entities or purposes, all while minimizing the number of actual bank accounts a company needs.
