According to our (Global Info Research) latest study, the global Virtual Client Computing Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Virtual client computing is defined as a computing model that provides desktop virtualization solution to improve limitations associated with the traditional distributed desktop environment. A client-based virtual machine is centrally managed on a server and then executed on a client device. Though the operating system is updated as well as backed up with the help of server, a continuous network connection is not needed for the functioning of a client-based virtual machine. Virtual client computing model is used to reduce the customers work effort and overall risk, by eliminating complexities and increase flexibility and minimize cost.
