Abstracts

The traditional method of data delivery and network services takes place through hardware devices. However, virtual customer premise equipment, on the other hand, does not use any specific hardware. It rather uses software and virtualization tools to replicate services such as routing, security in the firewall, and also virtual private network. The enterprises are heavily benefitted from virtualization as it improves the delivery of network service, allows for remote connectivity, and tends to be low on maintenance. Many enterprises are also benefitted from the network traffic load distribution.

Scope of the Report:

One of the major driving factors for the virtual customer premise equipment is the adoption of virtual CPE network infrastructure, increasing adoption of internet technologies and growing need of enterprise mobility market among others. Among the regions mentioned above and countries, the market was highly dominated by North America in 2017. This dominance was due to an established technological market establishment, especially in the United States. Also due to the higher adoption of virtual CPEs in enterprises contribute heavily towards the growth of this market in the United States and neighboring countries. The virtual CPE market has also seen its application in residential areas. There are many developments being done in the technology and technologies related to it. Many enterprises including various start-ups have begun deploying CPE either classic way or adoption through the cloud and have also started making a partnership with service providers and prominent players.

The global Virtual Customer Premise Equipment (CPE) market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
