According to our (Global Info Research) latest study, the global Virtual Design and Construction (VDC) Service market size was valued at US\$ 1158 million in 2024 and is forecast to a readjusted size of USD 1514 million by 2031 with a CAGR of 4.4% during review period.

Virtual Design and Construction (VDC) Services leverage advanced computer technology and software tools to perform design, simulation, analysis, and optimization of building projects in a virtual environment. These services enable comprehensive evaluation and optimization of design schemes before actual construction, effectively reducing construction risks and improving project quality and efficiency. VDC Services encompass the entire process from conceptual design to construction simulation. During conceptual design, designers can utilize virtual reality (VR) and augmented reality (AR) technologies to intuitively demonstrate design schemes' effects and spatial perceptions. In construction simulation, potential issues and risks can be predicted by simulating the construction process, enabling timely adjustments to construction schemes. Additionally, these services provide a collaborative work platform for project teams, facilitating information sharing, communication, and collaboration, thereby enhancing overall work efficiency.
