Abstracts

A virtual desktop infrastructure (VDI) solution can be considered a platform in which a client server is employed to access a user system virtually. This type of computing model makes use of a centralized storage space, where data and system applications are stored centrally on the server. End-users have to enter their login details to gain remote access to these applications and data from any location. However, establishing such a setup requires an uninterrupted network.

SCOPE OF THE REPORT:

This report studies the Virtual Desktop Infrastructure(VDI) market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Virtual Desktop Infrastructure(VDI) market by product type and applications/end industries.

According to the report, one of the primary drivers in the market is workplace flexibility and business agility. The VDI environment eliminates the need to manage thousands of individual systems and enables centralized management of resources in enterprise data centers or server rooms. Patches and software updates in VDI can be carried out in a centralized and simplified manner. Other benefits include higher flexibility, simplified backup operations, greater security control and compliance, faster problem resolving capabilities, rapid deployment of virtualized desktop, and application on-demand to any devices.

The global Virtual Desktop Infrastructure(VDI) market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR
