Abstracts

The global Virtual Dressing Room for eCommerce market size is expected to reach \$ 4124.7 million by 2029, rising at a market growth of 13.6% CAGR during the forecast period (2023-2029).

A virtual fitting room is a type of technology that allows customers to see how clothes, apparel, or make-up might look on them before purchasing from an online retailer. Using a combination of video, images, artificial intelligence, and augmented reality, they impose visualizations of a product over a 3D model or image of the customer. They are, essentially, the virtual equivalent of an in-store dressing room. Virtual fitting rooms are now widely available and in use by a growing number of major online retailers. The use of an integrated QR Code in e-commerce can further enhance the shopping experience by providing quick access to virtual fitting rooms, product information, or even discounts.

This report studies the global Virtual Dressing Room for eCommerce demand, key companies, and key regions.
