Abstracts

The global Virtual-First Care market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Virtual-first care is a telehealth trend that’s emerged in the past few years. Virtual-first care directs patients to a video visit, call, or other digital interaction with a clinician before or instead of an in-person visit. Payers, self-insured employers, and some providers use virtual-first care in primary and urgent care settings to more easily triage the patient’s care needs, determine the best care setting from in-person to virtual, and drive follow-up. There are similar applications for this use of technology in niche areas of telehealth like behavioral health and dermatology.

This report studies the global Virtual-First Care demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Virtual-First Care, and provides market size (US$ million) and Year-over-Year (YoY) growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Virtual-First Care that contribute to its increasing demand across many markets.
