Abstracts

Virtual inspection technologies represent a low-cost strategy that helps manufacturers achieve operational efficiency. Machine vision uses video cameras, analog-to-digital conversion, and digital signal processing technologies for application in surface defect detection, surface auto-vision, and AUVs.

SCOPE OF THE REPORT:

This report focuses on the Virtual Inspection in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

According to the report, the automotive industry is one of the fastest growing industries, contributing a major portion to the global virtual inspection market. Virtual inspection helps minimize production losses, lowers the requirement for trained staff, and reduces the chances of reworking. The use of the technology provides 24/7 support for fatigue-free functioning and so, manufacturing and assembly line plants implement this technology to ensure consistent quality.

The worldwide market for Virtual Inspection is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
