Abstracts

A virtual private network (VPN) extends a private network across a public network, and enables users to send and receive data across shared or public networks as if their computing devices were directly connected to the private network. ("In the simplest terms, it creates a secure, encrypted connection, which can be thought of as a tunnel, between your computer and a server operated by the VPN service.") Applications running across the VPN may therefore benefit from the functionality, security, and management of the private network.

VPNs may allow employees to securely access a corporate intranet while located outside the office. They are used to securely connect geographically separated offices of an organization, creating one cohesive network. Personal VPN Users Internet users may secure their wireless transactions with a VPN, to circumvent geo-restrictions and censorship, or to connect to proxy servers for the purpose of protecting personal identity and location. However, some Internet sites block access to known VPN technology to prevent the circumvention of their geo-restrictions.

A VPN is created by establishing a virtual point-to-point connection through the use of dedicated connections, virtual tunneling protocols, or traffic encryption. A VPN available from the public Internet can provide some of the benefits of a wide area network (WAN). From a user perspective, the resources available within the private network can be accessed remotely.

Traditional VPNs are characterized by a point-to-point topology, and they do not tend to support or connect broadcast domains, so services such as Microsoft Windows NetBIOS may not be fully supported or work as they would on a local area network

(LAN). Designers have developed VPN variants, such as Virtual Private LAN Service (VPLS), and layer-2 tunneling protocols, to overcome this limitation.

Scope of the Report:

This report studies the Virtual Private Network (VPN) market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Virtual Private Network (VPN) market by product type and applications/end industries.
The Europe VPN market generated the highest sales in 2017, as organizations in Europe are equipped with advanced technologies. Moreover, presence of large number of enterprises and increase in number of internet users have supplemented the market growth. The Asia-Pacific VPN market is expected to grow at the highest CAGR, owing to rise in penetration of internet, rapid industrialization, and significant economic growth.
In the cloud VPN connectivity type, the remote access cloud VPN is expected to hold the largest market share during the forecast period. This is due to the high adoption rate of mobile devices and Bring Your Own Device (BYOD) trends among organizations. In the organization size segmentation, the SMEs segment is expected to grow at a higher CAGR, due to the large-scale adoption of cloud VPN solutions and cost effectiveness and centralized management capabilities during the forecast period
In the cloud VPN end-user market, the verticals segment is expected to grow at the highest rate during the forecast period. This is due to the preference to purchase the cloud VPN solutions and services directly from software vendors without relying on third-party service vendors.
The global Virtual Private Network (VPN) market is valued at 1260 million USD in 2017 and is expected to reach 2660 million USD by the end of 2023, growing at a CAGR of 13.3% between 2017 and 2023.
The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Virtual Private Network (VPN).
Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
