## Abstracts

The global Virtual STEM Summer Camp market size is expected to reach \$ 2333 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

To address the limitations of traditional offline STEM summer camps, such as geographical, time, and cost constraints, uneven distribution of high-quality educational resources, and limitations in practical activities due to physical equipment and venues, virtual STEM summer camps have emerged. Since their rise in the early 21st century with the maturation of high-speed internet, virtual simulation technology, and online education platforms, adolescent science and technology education and distance learning models have undergone significant evolution. Currently, virtual STEM summer camps have developed into an innovative educational service integrating real-time interactive live streaming, virtual laboratory operations, project-based collaboration platforms, artificial intelligence learning assistants, and gamified challenge mechanisms. They are widely used in areas such as holiday learning for primary and secondary school students, after-school enrichment programs, science popularization in areas with limited educational resources, and remote participation for special groups. This new educational solution effectively breaks through time and space limitations, provides personalized learning paths, stimulates scientific interest, and cultivates future innovative talents on a large scale.

Virtual STEM summer camps are transforming from 'technology tool application' to 'ecological value creation,' driven by policy support, technological empowerment, and consumption upgrades. By building a system covering six dimensions?market intelligence, technology tool chain, supply chain collaboration, intelligent upgrading, competitive strategies, and risk compliance?it is possible to optimize the entire process from demand insight to service delivery, paving the way for growth while overcoming challenges such as technological homogenization, market fragmentation, and policy

risks.
