Abstracts

The global Virtual VoIP Apps market size is expected to reach $ 35740 million by 2029, rising at a market growth of 10.5% CAGR during the forecast period (2023-2029).

The key players of Virtual VoIP Apps include Zoom, Rakuten Viber, Cisco, Microsoft, Mitel, RingCentral, Avaya, Twilio, Meta, 8x8, etc. The top five players have a combined market share of about 36%.

North America is the world's largest market with about 38%, followed by Europe with about 28%. The market share in the Asia-Pacific region will increase in the future.

It is mainly divided into Android OS, iOS, Window OS and other subcategories, among which Android OS has the highest market share of about 40%.

Its end customers include SMEs and large enterprises. The percentage of SMEs is even higher, at about 58%.

A virtual phone system is a communication platform that allows you to make and receive calls through the internet and the cloud rather than through a physical landline. A virtual phone system lets users make and receive calls on a desktop app, mobile phone, or desk phone, all from a single business phone number.

Voice over internet protocol (VoIP) is a type of phone system that uses an internet connection to make and receive calls, rather than traditional landlines.

VoIP converts your phone calls into data that is sent over the internet. You can use the Ethernet cables or skip them if you have a strong Wi-Fi signal. It does so at a much

lower cost than older telephone systems. Voice over IP has many advantages over traditional phone service.

Cloud telephony is a type of unified communications as a service (UCaaS), essentially enabling organisations to run a business phone system through their internet connection.

Also commonly known as cloud calling, cloud telephony offers business voice services, run and managed by a third-party operator or host. A cloud phone system, often in the form of a VoIP- based hosted PBX system (voice over internet protocol), carries voice calls as well as messaging, video calls and file sharing all under one unified platform via your business internet connectivity.

On a practical level, cloud telephony works in the same way as any other VoIP service, by converting analogue voice signals into data packets and transmitting them over an internet connection. In the case of cloud telephony, when a user dials a phone number using a VoIP desk phone or softphone, the call is routed by a third-party VoIP service provider.

This report studies the global Virtual VoIP Apps demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Virtual VoIP Apps, and provides market size (US$ million) and Year-over-Year (YoY) growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Virtual VoIP Apps that contribute to its increasing demand across many markets.
