Abstracts

Virtual Evolved Packet Core (vEPC) is a framework for virtualizing the functions required to converge voice and data on 4G Long-Term Evolution (LTE) networks. VEPC moves the core network's individual components that traditionally run on dedicated hardware to software that operates on low-cost commercial off-the-shelf (COTS) servers.

Scope of the Report:

This growth is primarily due to the wide adoption of Virtualized EPC solutions across telco's, thereby generating demand for consulting services, implementation and deployment services, and training and support services.
