Abstracts

The global Virtualized Radio Access Network (vRAN) market size is expected to reach \$ 6799.1 million by 2029, rising at a market growth of 19.3% CAGR during the forecast period (2023-2029).

Global key producers of virtualized radio access networks (vRAN) include Samsung, Nokia, NEC and others. The top three producers together account for more than 60% of the share, with the largest producer being Samsung at 26%. North America has the largest consumption market, with a 36% share. In terms of its product categories, software holds the largest market share, with a share of about 55%, followed by platforms. In terms of its applications, indoor base stations hold about 77% of the market share, while outdoor base stations account for a smaller share.

Virtualized radio access networks (vRANs) are a way for telecommunications operators to run their baseband functions as software. One of the primary benefits of virtualizing radio access networks (RANs) is that RAN functions no longer require special proprietary hardware to run, and can instead be run on standard servers. This is achieved by applying the principles of virtualization to RAN, and is usually one part of a larger network function virtualization (NFV) effort.

This report studies the global Virtualized Radio Access Network (vRAN) demand, key companies, and key regions.
