Abstracts

A virus filtration system is a specialized filtration technology used to remove viruses from liquids, such as biopharmaceutical solutions, vaccines and blood products. Typically employed in the pharmaceutical and biotechnology industries, virus filtration systems utilize membranes with specific pore sizes designed to effectively capture and retain viruses while allowing the passage of smaller molecules. These systems are crucial for ensuring the safety and purity of pharmaceutical products by providing an additional layer of protection against viral contamination. Virus filtration plays a vital role in maintaining the integrity of biologics and ensuring compliance with regulatory standards for product safety in the pharmaceutical industry.
