Abstracts

According to our (Global Info Research) latest study, the global Viscometers market size was valued at US\$ 289 million in 2025 and is forecast to a readjusted size of US\$ 394 million by 2032 with a CAGR of 4.6% during review period.

Viscometers are instrument used to measure the viscosity of a fluid. For liquids with viscosities, which vary with flow conditions, an instrument called a rheometer is used. Viscometers only work under one flow condition. In general, either the fluid remains stationary and an object moves through it, or the object is stationary and the fluid moves past it. The drag caused by relative motion of the fluid and a surface is a measure of the viscosity. The flow conditions must have a sufficiently small value of Reynolds number for there to be laminar flow.

The viscometers market is driven by the increasing demand from industries such as automotive, pharmaceuticals, food and beverages, and chemicals, where precise viscosity measurement is critical for quality control and product performance. As these industries expand, the need for accurate and reliable viscometers grows, particularly with the push for automation and real-time monitoring in production processes. Additionally, advancements in viscometer technology, such as digital and portable devices, are making it easier for industries to adopt more efficient viscosity measurement solutions. A major challenge in the viscometers market is the high cost associated with advanced equipment and maintenance, particularly for industries in developing regions. The calibration and upkeep of high-precision viscometers can also be resource-intensive, requiring specialized expertise. Furthermore, variations in viscosity measurement standards across different industries and countries complicate global adoption, making it difficult for manufacturers to develop universally applicable solutions that meet diverse regulatory requirements.

The key players of viscometers are Brookfield, PAC, Anton Paar etc. Top 5 companies occupied about 40% market share. Asia-Pacific is the largest Viscometers market with about 36% market share. Europe is follower, accounting for about 26% market share. In terms of product, laboratory viscometers is the largest segment, with a share over 40%. And in terms of application, the largest application is petroleum, followed by chemical.
