According to our (Global Info Research) latest study, the global Viscose-based Graphite Soft Felt market size was valued at US\$ 94.41 million in 2025 and is forecast to a readjusted size of US\$ 138 million by 2032 with a CAGR of 5.7% during review period.

Viscose-based graphite soft felt is a type of graphite material produced from viscose fibers through a series of high-temperature treatments, including carbonization and graphitization. Viscose fibers are a type of regenerated cellulose fiber made from natural cellulose raw materials (such as wood, cotton linters, etc.) through chemical processing. During high-temperature exposure, non-carbon elements (such as hydrogen and oxygen) in the viscose fibers are gradually removed, and the carbon atoms rearrange to form a graphite crystal structure, ultimately resulting in the production of viscose-based graphite felt.
