Abstracts

The global Viscose Based Graphite Soft Felt market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Viscose based carbon fiber graphite felt is made from viscose based short fiber needle punched felt as raw material, which is subjected to oxidation, low-temperature carbonization, high-temperature carbonization, and graphitization treatment. Due to the unique properties and structure of adhesive based fibers, the shortcomings of polyacrylonitrile graphite felt, such as easy pulverization, rough surface, and sticking, are solved under continuous high temperatures. Compared with polyacrylonitrile graphite felt, it has a power saving rate of over 15% and significantly improves the material's service life. Viscose based carbon fiber graphite soft felt is produced by a continuous production line, with a product length of over 100 meters. It has characteristics such as uniform felt surface, uniform conductivity, light weight, high temperature resistance, and corrosion resistance.

This report studies the global Viscose Based Graphite Soft Felt production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Viscose Based Graphite Soft Felt, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
