The global Visible Light Stick for Anesthesia market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Visible light rod is a hard rod-shaped intubation tool. Because it can display the scene in front of the light stick on the screen through the circuit in the light stick, it is called a visible light stick. To use, the anesthetist puts the endotracheal tube over the light stick. When the glottis is visible, simply push the endotracheal tube directly into the glottis.
