## Abstracts

The global Visual Axis Marker market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Visual axis marker is a medical device used in ophthalmology procedures, particularly in cataract surgery, to accurately mark the visual axis of the eye. It typically consists of a small, lightweight instrument with a fixed marker or movable parts for precise alignment. The visual axis marker is placed on the cornea or used in conjunction with a microscope to ensure accurate measurement and alignment of surgical incisions or intraocular lens (IOL) placement. This helps to provide optimal visual outcomes and minimize astigmatism or other refractive errors post-surgery.
