## Abstracts

The global Visual Self-Service Robot market size is expected to reach \$ 14830 million by 2032, rising at a market growth of 15.6% CAGR during the forecast period (2026-2032).

Visual Autonomous Service Robots (VASR) are intelligent robots that integrate computer vision, artificial intelligence and autonomous navigation technologies, enabling them to independently perceive, make decisions and perform service tasks in complex environments. In terms of classification, VASR are mainly divided into two categories: indoor service robots and outdoor service robots. Indoor service robots are mainly used in commercial services, medical care, warehousing and logistics, and home companionship, focusing on environmental perception and autonomous navigation accuracy. Outdoor service robots are applied in park inspection, intelligent transportation, security patrol and delivery, emphasizing environmental adaptability and dynamic obstacle avoidance capabilities. With their high efficiency and convenience, visual autonomous service robots improve service quality and user experience by providing personalized services to customers. In 2025, global Visual Self-Service Robot production reached approximately 202 K Unit.

Vision-based autonomous service robots are widely used in hotel front desk reception, material distribution in medical campuses, automatic handling in logistics and warehousing, intelligent guidance, and public area inspection. Driven by the rapid development of e-commerce and the express delivery industry, demand for automatic delivery and inspection robots has increased significantly. The market for vision-based autonomous service robots features high technical barriers and substantial R&D investment. In China, government policy support has been strengthened. The 2023 National Key R&D Program of the Ministry of Science and Technology, under the key

project 'Intelligent Robots', plans to allocate 329 million yuan of national funding, deploying 30 guideline tasks covering core components, industrial robots, service robots, and special robots. Overall, applications are driven by demand from e-commerce, smart logistics, and service industry automation. Industry competition is led by technologically advanced enterprises. Chinese companies are rapidly catching up in algorithm optimization, cost control, and large-scale application. Driven by both policy support and market demand, China is expected to occupy a more important position in the global market in the future.
