## Abstracts

The global VMS Trailers market size is expected to reach \$ 282 million by 2032, rising at a market growth of 4.8% CAGR during the forecast period (2026-2032).

In 2025, global VMS Trailers production reached approximately 23040 Units, with an average global market price of around 8526 USD per Unit.

VMS Trailers are trailer-mounted mobile traffic information systems equipped with electronic LED message boards that can display changeable text, symbols, arrows, speed warnings, and traffic guidance messages. They are designed for temporary or movable deployment in road construction zones, highway maintenance areas, emergency incidents, public events, parking management, and other traffic control scenarios.

Unlike fixed variable message signs installed on gantries or roadside structures, VMS Trailers are built on towable trailer platforms and can be transported, positioned, and redeployed according to temporary traffic management needs. They commonly integrate LED display panels, trailer chassis, solar panels, battery systems, control units, communication modules, GPS positioning, and optional radar speed detection or camera systems.

VMS Trailers, with their unique advantages of flexible deployment, no need for fixed civil engineering, remote wireless information updates, and self-powered long-term operation, precisely address the industry pain points of traditional traffic information equipment, such as fixed installations, delayed deployment, reliance on mains power, and slow emergency response. They effectively fill information dissemination gaps in scenarios such as temporary traffic control, road construction, and emergency rescue,

balancing practicality and convenience. Driven by the continuous advancement of smart transportation construction, the normalization of temporary traffic management needs, and the continuous improvement of emergency response systems, coupled with the trend of infrastructure upgrades and the widespread adoption of digital traffic control in various regions, their application scenarios will continue to expand, and market demand will steadily increase.

The upstream raw materials for VMS Trailers mainly include steel structural components, LED displays, controllers, lithium batteries, and solar panels. Typical suppliers include Baowu Steel, ArcelorMittal, Nippon Steel Corporation, BOE, Samsung Electronics, CATL, etc. The downstream applications are mainly for traffic guidance and control on urban roads and highways, and the customers are mainly road traffic management departments of various countries.

The production capacity of a single production line for VMS Trailers varies considerably depending on the company size, the level of automation of the production line, and the type and function of the products, typically ranging from several hundred to several thousand units. The industry's gross profit margin is usually in the range of 30%-40%.
