Abstracts

The global VOC Gas Detector market size is expected to reach $ 758 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

VOC gas detectors are professional direct-reading instruments designed to detect, display, record and alarm on the presence or concentration of volatile organic compounds in industrial workplaces, around process equipment and piping components, in confined spaces, emergency-response zones, indoor environments and other monitored atmospheres

From the demand side, refining, chemicals, oil and gas production, coating operations and other solvent-intensive industries remain the core installed base. Major use cases include screening valves, pumps, connectors and other process components for fugitive emissions; supporting shutdowns and maintenance; assessing confined spaces; evaluating occupational exposure; and responding to spills or accidental releases. The US EPA continues to position Method 21 as a central measurement approach within leak detection and repair programmes for refineries and chemical manufacturing facilities, noting that leaking process equipment can be a significant source of VOCs and volatile hazardous air pollutants. China has established a complementary regulatory framework through its standard for fugitive VOC emission control, technical guidance for industrial LDAR programmes and requirements to strengthen enforcement equipment, including portable rapid VOC instruments and leak detectors. Demand is also broadening beyond conventional petrochemical applications. Semiconductor, battery, pharmaceutical, biotechnology, laboratory and clean-production environments increasingly require monitoring of low-level solvent vapours and selected toxic compounds, shifting part of the market from basic leak presence toward exposure management, documented measurement histories and substance-specific risk

assessment.

From a product-development perspective, the principal direction of the market is toward lower detection limits, improved selectivity, integration of personal and area monitoring, direct wireless connectivity and the use of measurement data within broader safety-management platforms. Advanced selective instruments combine pre-separation with PID measurement to quantify benzene, 1,3-butadiene and other toxic or carcinogenic VOCs at concentrations relevant to occupational exposure. Connected personal and area-monitoring products transmit gas readings, worker location, device status and alarms directly to cloud software or control centres, turning a detector from a standalone measurement device into a node within a real-time operational-safety system. Recent product development supports this conclusion.

Report Scope

This report studies the global VOC Gas Detector production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for VOC Gas Detector and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of VOC Gas Detector that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global VOC Gas Detector total production and demand, 2021-2032, (K Units)

Global VOC Gas Detector total production value, 2021-2032, (USD Million)

Global VOC Gas Detector production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (K Units), (based on production site)

Global VOC Gas Detector consumption by region & country, CAGR, 2021-2032 & (K Units)

U.S. VS China: VOC Gas Detector domestic production, consumption, key

domestic manufacturers and share

Global VOC Gas Detector production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (K Units)

Global VOC Gas Detector production by Type, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

Global VOC Gas Detector production by Application, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

This report profiles key players in the global VOC Gas Detector market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Honeywell Technologies, ION Science Ltd, Dräger, MSA Safety Incorporated, Industrial Scientific Corporation, Riken Keiki Co., Ltd, New Cosmos Electric Co., Ltd, GfG, Crowcon Detection Instruments Ltd, SENKO Co., Ltd, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World VOC Gas Detector market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (K Units) and average price (US$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
