## Abstracts

According to our (Global Info Research) latest study, the global Vocs Processing Facility market size was valued at USD 1447.2 million in 2023 and is forecast to a readjusted size of USD 3328 million by 2030 with a CAGR of 12.6% during review period.

Volatile organic compounds (VOCs) are organic chemicals that have a high vapour pressure at room temperature. High vapor pressure correlates with a low boiling point, which relates to the number of the sample's molecules in the surrounding air, a trait known as volatility. VOCs are responsible for the odor, scents, and perfumes as well as pollutants. VOCs play an important role in communication between animals and plants, e.g. attractants for pollinators, protection from predation, and even inter-plant interactions. Some VOCs are dangerous to human health or cause harm to the environment. Anthropogenic VOCs are regulated by law, especially indoors, where concentrations are the highest. Most VOCs are not acutely toxic, but may have long-term chronic health effects.

Global Vocs Processing Facility includes Linde plc, Bay Environmental Technology, Shengjian Environment, Nichias, etc. Global top 4 companies hold a share over 33.59%. Asia-Pacific is the largest market, with a share about 54.08%, followed by Europe and North America with the share about 20.14% and 16.70%.
