According to our (Global Info Research) latest study, the global Voice Coil Motor Optical Fiber Delay Lines market size was valued at US\$ 33.3 million in 2024 and is forecast to a readjusted size of USD 43.1 million by 2031 with a CAGR of 3.7% during review period.

The voice coil motor optical fiber delay line is a device that utilizes a voice coil motor to precisely control the delay time of optical signals in an optical fiber. A voice coil motor is a special type of motor that operates based on Ampere's force law. When current passes through the coil of the voice coil motor, it generates a force in a magnetic field, driving the motor's mover to move. In the optical fiber delay line, the mover of the voice coil motor is connected to the optical fiber or a portion of it. By precisely controlling the displacement of the mover, the length of the transmission path for optical signals in the optical fiber is altered, thereby achieving control over the delay time of the optical signals.
