Abstracts

Voice-controlled devices use voice recognition software to convert and decode the human voice into signals that are easily understood by the devices. Voice recognition is the ability of a machine to receive, understand, and dictate spoken commands. It is used for various purposes such as opening locked devices, sending emails and text messages, and initiating phone calls. Voice-controlled devices analyze the voice of a particular person and subsequently grant or deny access to functions. Voice recognition technology has become very popular in areas such as mobile banking, which requires users to identify themselves via spoken commands before making transactions.

SCOPE OF THE REPORT:

This report focuses on the Voice Controlled Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

According to the report, all existing voice recognition systems make use of cloud servers to understand the user better. For instance, if we ask a smartphone or smartwatch for nearby restaurants, a cloud server will return results and track whether you click on one of the results. This helps the service provider better understand if the provided results were accurate or not. Similarly, millions of such voice searches are processed using cloud servers, and the data from them is analyzed and processed in order to improve search results.

The worldwide market for Voice Controlled Devices is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million

US\$ in 2017, according to a new GIR (Global Info Research) study.
