Voicemail transcription is a service that converts audio voicemail messages into text format, which is then sent to the user via email or text message. It is sometimes referred to as 'speech to text', 'voice to text' or 'voicemail to text'. While this feature is included with some cloud phone systems, it can also be integrated with an existing business voicemail service. In this case, the user directs his/her voicemail-to-email feature to send all voicemails to the third party transcription service. The third party service then transcribes the voicemails and sends the user an email or SMS with the transcription.
