## Abstracts

The global Voicemail Transcription Services market size is expected to reach \$ 2739.9 million by 2029, rising at a market growth of 10.5% CAGR during the forecast period (2023-2029).

Voicemail transcription is a service that converts audio voicemail messages into text format, which is then sent to the user via email or text message. It is sometimes referred to as 'speech to text', 'voice to text' or 'voicemail to text'. While this feature is included with some cloud phone systems, it can also be integrated with an existing business voicemail service. In this case, the user directs his/her voicemail-to-email feature to send all voicemails to the third party transcription service. The third party service then transcribes the voicemails and sends the user an email or SMS with the transcription.

This report studies the global Voicemail Transcription Services demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Voicemail Transcription Services, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Voicemail Transcription Services that contribute to its increasing demand across many markets.
