## Abstracts

According to our (Global Info Research) latest study, the global Volatile Organic Compounds (VOCs) Absorbent market size was valued at US\$ 1420 million in 2025 and is forecast to a readjusted size of US\$ 2227 million by 2032 with a CAGR of 6.5% during review period.

Volatile Organic Compound (VOC) Absorbents are dry adsorption/absorption materials used to remove VOC gases. They primarily include activated carbon, impregnated carbon, honeycomb carbon, zeolites/molecular sieves, resin adsorbents, oxidizing filter media, and composite filter media. The estimated gross margin is approximately 36%.

VOC absorbents are key consumables in gas-phase filtration and industrial exhaust treatment. While the market size is smaller than complete VOC treatment systems, these products have stronger repeat-purchase characteristics. Demand mainly comes from applications such as coating, printing, electronics, chemicals, packaging, petrochemical oil and gas, and automotive fuel vapor control. Growth is driven by emission regulations, plant capacity expansion, and consumable replacement.

Standard granular activated carbon and honeycomb carbon face intense competition, transparent pricing, and relatively low margins. High-iodine/low-ash carbon, impregnated carbon, hydrophobic zeolites, rotary molecular sieves, and solvent-recovery-grade resin adsorbents have higher requirements for pore size, adsorption capacity, desorption stability, and flame-retardant safety, resulting in significantly higher unit prices and margins than general-purpose carbon.

The VOC absorbent market is projected to grow at a CAGR of approximately 6.7% from

2026 to 2032. Growth will primarily be driven by VOC control upgrades in Asian manufacturing, consumable replacement in existing European and U.S. equipment, improved economics of solvent recovery, and the shift from single-use carbon beds to renewable adsorbent materials for low-concentration, high-volume exhaust streams.
