Abstracts

VoLTE technology enables voice calls over an LTE network, in comparison to the previously used technology supporting voice calls over 2G and 3G networks. This technology is similar to VoIP which is applied to support voice calls over a broadband connection. The difference between VoIP and VoLTE is that VoIP sends voice over the circuit-switched network, but VoLTE sends voice calls over IP-based LTE networks. VoLTE is used among enterprises as well as individual consumers for video and voice services.
