According to our (Global Info Research) latest study, the global Volumetric Feeder market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A volumetric feeder is a set-speed device that's dependent on a constant, choke-fed, or flooded infeed of a particulate solid, and it feeds by volume only. Volumetric feeders use an auger or screw conveyor running at a constant speed to discharge powder from a storage hopper at a consistent rate. Frequently, the hopper includes devices to condition the bulk material to ensure an even bulk density by using vibration, agitation, massaging or other means to eliminate air pockets and maintain flow.
