Volumetric push-type lotion pump is a liquid dispenser that uses the atmospheric balance principle to pump out the liquid in the bottle by pressing and replenish the outside atmosphere into the bottle. The volumetric push-type lotion pump is a specially designed packaging device designed to hygienically and efficiently dispense daily chemical products. It is usually integrated into the packaging bottles of products such as micellar water, toner, essence or lotion, which allows users to control the amount of product used while minimizing pollution.

Driven by a surging demand for cosmetics, Volumetric Push-type Lotion Pumps are witnessing robust growth. Consequently, brands are seizing value-added opportunities, introducing innovative dispensing solutions prioritizing functionality and convenience. This strategy aids brands in establishing equity within a crowded commodity market. With a rising emphasis on premiumization and customization, the end-use industry is channeling investments into advanced packaging solutions, further propelling market demand during the forecast period. Additionally, Volumetric Push-type Lotion Pumps enhance product functionality. While this added feature comes at a premium, it allows brands to market their products as high-end offerings. As a result, many key applications are witnessing a shift from basic screw caps and closures to more sophisticated dispensers.
