## Abstracts

According to our (Global Info Research) latest study, the global Vortex Cooling Tubes market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Vortex cooling tubes are devices that use compressed air to generate cold air for spot cooling applications. They operate based on the vortex tube principle, where compressed air is forced through a specially designed generator that causes the air to spin rapidly, separating it into hot and cold air streams. The cold air is then directed for cooling purposes, while the hot air is vented away.
