The global VR Ophthalmic Surgery Simulator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

VR ophthalmic surgery simulator is a type of eye surgical simulation technology using virtual reality. The simulator utilizes high fidelity VR technology and interactive devices to assist medical students and ophthalmologists in practicing and training for eye surgeries in a virtual environment, in order to improve their skills and surgical quality. The simulator can simulate various eye surgeries, such as cataract removal and vitreous cutting, and can also simulate different surgical situations and complications. The simulator can provide visual and tactile feedback to give users a near-realistic surgical experience, allowing them to better prepare for future actual surgical operations. The VR ophthalmic surgery simulator provides a new way for eye medical training and surgical skill improvement, allowing medical students and doctors to conduct more practical operations and skill training without increasing risk and cost.
