According to our (Global Info Research) latest study, the global ?Synthetic Racing Oil market size was valued at US\$ 544 million in 2024 and is forecast to a readjusted size of USD 724 million by 2031 with a CAGR of 4.2% during review period.

Synthetic racing oil is a specialized lubricant meticulously engineered to meet the extreme demands of high-performance racing engines. It is formulated using synthetic base stocks, which are chemically created from raw materials rather than being derived directly from crude oil, unlike conventional mineral oils. These base stocks are combined with a precise blend of high-quality additives, such as detergents to keep the engine clean by preventing the buildup of sludge and deposits, dispersants to suspend contaminants, antioxidants to resist oxidation and thermal breakdown under intense heat, and anti-wear agents to protect critical engine components from excessive friction and wear. Synthetic racing oil offers superior thermal stability, allowing it to maintain its lubricating properties over a wide range of temperatures, from freezing cold starts to the searing heat generated during high-speed racing. It also has a lower viscosity index, ensuring consistent flow and lubrication even in extreme conditions, which in turn enhances engine efficiency, power output, and durability, making it an essential component for competitive motorsports.
