According to our (Global Info Research) latest study, the global Vulnerability Management Solution market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Vulnerability management tools scan enterprise networks for weaknesses that may be exploited by would-be intruders. Should the scan find a weakness the vulnerability software suggests or initiates remediation action. In this way, vulnerability management software reduces the potential of a network attack. This approach to network security differs from firewalls, antivirus or antispyware software, and Intrusion Detection Systems (IDS). These security tools are designed to manage attacks on the network as they occur. In contrast, vulnerability management tools instead search for potential weaknesses and fix them in an attempt to mitigate potential future network attacks.
