Abstracts

The global Vunakizumab market size is expected to reach \$ 185 million by 2032, rising at a market growth of 8.6% CAGR during the forecast period (2026-2032).

Vunakizumab is a humanized anti-IL-17A monoclonal antibody independently developed by Hengrui Medicine. It can specifically bind to Interleukin-17A (IL-17A), block its interaction with receptors, inhibit inflammatory signaling pathways, and reduce inflammation in the skin, joints and other tissues. It is mainly used for the treatment of psoriasis, ankylosing spondylitis, psoriatic arthritis and other autoimmune diseases, characterized by high affinity, long half-life, long dosing interval and good safety. In 2025, global vunakizumab production reached approximately 1.2 million vials.

Vunakizumab is a Class 1 domestic innovative drug independently developed by Hengrui Medicine and one of the first anti-IL-17A monoclonal antibodies approved in China. Since its launch, it has rapidly become an important participant in the therapeutic market for autoimmune diseases. With the advantages of high affinity, low immunogenicity, rapid onset and convenient administration, the drug has broken the long-term monopoly of imported IL-17A inhibitors and provided a domestic alternative for patients with psoriasis, ankylosing spondylitis and other diseases. Driven by three core factors, namely medical insurance coverage, expanded indications and optimized pricing, its market penetration has been continuously improved, making it a core growth product in the field of domestic autoimmunity. In terms of competitive landscape, vunakizumab and selicilizumab from Chuangxiang Jintai constitute the first echelon of domestic IL-17A inhibitors, forming a competition pattern of 'import-dominated, domestic catching-up' with imported products from Novartis, Eli Lilly and other companies. In the future, relying on Hengrui's commercialization capacity, medical insurance volume expansion effect and potential indication expansion (such as psoriatic arthritis and

rheumatoid arthritis), vunakizumab is expected to further expand its market share and promote domestic substitution and price penetration in the domestic autoimmune disease treatment market.
