??Hydraulic Folding Hatch Cover is an efficient hatch cover system for ships. Driven by a hydraulic cylinder, the cover can be folded and stored on one or both sides of the hatch. It is composed of multiple covers connected by hinges. When opened, the hydraulic cylinder pushes the covers to fold. When closed, the covers lie flat to form a seal, protecting the goods in the cargo hold from the influence of the external environment. This design has the advantages of simple operation, compact structure and strong adaptability, and is widely used in bulk carriers, multi-purpose ships, etc., to improve the efficiency of cargo loading and unloading and the utilization rate of cargo hold space.
