## Abstracts

According to our (Global Info Research) latest study, the global Wafer Clamp Ring market size was valued at USD 22 million in 2022 and is forecast to a readjusted size of USD 31 million by 2029 with a CAGR of 4.8% during review period.

A clamp ring used to hold or handle the silicon wafer. Semiconductor fabrication equipment relies on a vast range of different components made of high performance plastics. Among other parts, wafer rings or more precisely wafer clamp rings are commonly used for supporting and accurately positioning the wafer throughout various processing operations. Clamping the wafer is critical for maintaining precise processing tolerances, thus maintaining wafer yields.

Semiconductor manufacturing equipment is a medium tool for achieving semiconductor manufacturing processes, playing an important role in all aspects. According to SEMI, worldwide sales of semiconductor manufacturing equipment increased 5% from \$102.6 billion in 2021 to an all-time record of \$107.6 billion in 2022.

In recent years, the localization process of China's semiconductor industry has further accelerated, and the performance of semiconductor equipment is more flexible than the overall industry. The localization of semiconductor equipment is ushering in a golden wave, and domestic semiconductor equipment is facing more opportunities for verification and trial use, technical cooperation, and import substitution. For the third consecutive year, China remained the largest semiconductor equipment market in 2022 despite a 5% slowdown in the pace of investments in the region year over year, accounting for \$28.3 billion in billings.

The record high for semiconductor manufacturing equipment sales in 2022 stems from the industry's drive to add the fab capacity required to support long-term growth and innovations in key end markets including high-performance computing and automotive. Additionally, the results reflect investments and determination across regions to avoid future semiconductor supply chain constraints like those that surfaced during the pandemic.
