Abstracts

The global Wafer De-taping Tape market size is expected to reach \$ 69.20 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of Wafer De-taping Tape reached approximately 1.356 million square meters, with an average global selling price of around USD 30 per square meter, varying by product specification. The gross margin of major industry players was approximately 35%–55%. Wafer De-taping Tape is a functional adhesive tape used in semiconductor wafer back-end processes. It is mainly applied in wafer back grinding, temporary bonding/debonding, and pre-packaging processes to stably remove back grinding protective tape, temporary protective film, or process film attached to the wafer surface. Its key performance requirements include stable adhesion, low residue, low contamination, antistatic properties, and low peeling stress, which help reduce the risk of thin-wafer breakage, warpage, and surface contamination, while improving automated de-taping efficiency and back-end process yield.

This report studies the global Wafer De-taping Tape production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Wafer De-taping Tape and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
