According to our (Global Info Research) latest study, the global Wafer Defect Bright and Dark Field Inspection Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Wafer defect bright and dark field detection is based on optical imaging technology to detect patterned wafers. Bright field means that the angle of illumination light and the angle of collection light are completely or partially the same. The light reflected from the surface of the wafer is formed; while the dark field means that the angle of the illumination light and the angle of the collected light are completely different, so the final image formed on the photoelectric sensor is the 3D image of the illumination light incident on the wafer surface and the graphic surface. Structures are formed by light scattered back.
