The global Wafer Dust-Free Release Paper market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Wafer dust-free isolation paper is a special paper material used in the semiconductor manufacturing process, which has dust-free, anti-static, and anti pollution characteristics, used to protect wafers from dust, static electricity, and impurities. Wafers are very sensitive in the semiconductor manufacturing process, and small pollutants such as dust, static electricity, and impurities may have a serious impact on the wafer, leading to a decrease in device quality and even failure. Therefore, in order to protect the purity of wafers, wafer dust-free isolation paper is widely used. Wafer dust-free isolation paper usually has the following characteristics: 1 Dust free: The surface of the wafer dust free isolation paper is specially treated to effectively adsorb and block dust particles in the air, preventing them from adhering to the wafer surface. 2. Anti static: Wafer dust-free isolation paper has anti static performance, which can reduce the impact of static electricity on the wafer and prevent device damage caused by electrostatic discharge. 3. Anti pollution: Wafer dust-free isolation paper has excellent pollution protection performance, which can effectively block the invasion of pollutants such as liquids, chemicals, and small particles into the wafer. Wafer dust-free isolation paper is usually supplied in rolls or sheets, and can be cut and used according to the size and requirements of the wafer. It is widely used in semiconductor manufacturing, optical device manufacturing, biomedical and other fields to protect the purity and quality of wafers.
