The wafer edge profile measurement machine is a high-precision detection device specially designed to measure the edge profile, shape and defects of wafers to ensure that the wafers meet strict size and quality standards during the manufacturing process. Its advantage lies in the use of non-destructive optical technology, which can accurately measure the edge characteristics of wafers and provide micron-level repeatability. Features include integrated robot loading and unloading and unmanned transport vehicle systems, which realize efficient automated detection, and high measurement speed. It can detect up to 60 to 120 wafers per hour, greatly improving the quality control and efficiency of wafer production.
