Abstracts

The global Wafer Foundry Service market size is expected to reach \$ 454530 million by 2029, rising at a market growth of 13.5% CAGR during the forecast period (2023-2029).

Increasing demand for semiconductor devices: The growing demand for smartphones, tablets, wearable devices, automotive electronics, and other emerging technologies has been driving the demand for wafer foundry services. This trend is expected to continue as the digital transformation and the Internet of Things (IoT) continue to evolve.

Advanced process technologies: There has been a continuous push for advanced process technologies in the semiconductor industry, such as smaller node sizes (e.g., 7nm, 5nm, and beyond). This trend has led to a higher demand for wafer foundry services capable of manufacturing chips using these advanced nodes.

Growing importance of foundry services in the fabless model: The fabless semiconductor model, where companies focus on chip design and outsource manufacturing to foundries, has gained prominence. This trend has led to increased reliance on wafer foundry services, as fabless companies require reliable and high-quality manufacturing partners.

Rising capital expenditure: The semiconductor industry is capital-intensive, requiring significant investments in manufacturing facilities and equipment. Foundries have been investing heavily in expanding their capacities and upgrading their facilities to meet the growing demand for semiconductor chips.

The global wafer foundry services market size was valued at USD 181.5 billion in 2022 and is expected to reach USD 428.6 billion by 2029, growing at a CAGR of 14.2%

during the forecast period. The demand for wafer foundry services is rapidly increasing with the rising demand for electronic devices such as smartphones, tablets, laptops, and other connected devices. Additionally, the growing adoption of advanced technologies such as artificial intelligence, Internet of Things (IoT), and 5G is expected to boost the growth of the market.
