According to our (Global Info Research) latest study, the global Wafer Grinder market size was valued at USD 631.8 million in 2023 and is forecast to a readjusted size of USD 910.5 million by 2030 with a CAGR of 5.4% during review period.

Wafer Grinder uses a centrally located robot to move a wafer from an input station to a measuring station. Thereafter, the wafer is moved into a grind station and a wash station sequentially. The robot is able to move a wafer from the wash station to either the measuring station for after-grinding measurements or directly to an output station. During grinding of one wafer, a second wafer may be held between the measuring station and the grind station while a ground wafer is moved from the wash station to the measuring station for after-grinding measurements.
