## **Abstracts**

According to our (Global Info Research) latest study, the global Wafer Heating Plate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A wafer heating plate is a device used to heat semiconductor wafers. It is usually made of a high thermal conductivity material, such as graphite or ceramic, that conducts heat evenly across the wafer surface. Wafer heating plates are widely used in multiple links in the semiconductor manufacturing process, such as wafer cleaning, thin film deposition, photolithography, annealing, etc. By controlling the temperature of the heating plate, precise heating of the wafer can be achieved to meet the requirements of different process steps. At the same time, the wafer heating plate can also be integrated with other equipment and systems to realize an automated wafer processing process.
